

SECURITY STATEMENT

Security is a priority at Members First Credit Union. We are committed to protecting the security and confidentiality of your information. We use state-of-the-art technology to help ensure that your online sessions with our servers are secure. In addition, service providers that act on our behalf agree in writing to provide the same level of security that our systems do.

Your information is encrypted during the transfer between your browser and our site. This technology, called Secure Socket Layers (SSL), protects information you submit or receive through our online access site. Your browser must support SSL encryption to use our site. Newer versions of all the popular browsers are capable (e.g., Internet Explorer 6, Mozilla Firefox, and Netscape Navigator 8). Encrypted sites are designated by beginning with https: instead of just http:).

Members First Credit Union uses firewalls to help limit entry by anyone without proper authorization. A firewall is a security mechanism that regulates the data going in and out of a network. It is a specialized program which acts as a filter against unauthorized connections.
